FOREWORD

Technical standardization and standards play an important role in the support of economic development. Nowadays, almost every sector relies on standards to function day-to-day and provide services in an efficient manner. They can provide, for example, good practices for services and product development, governance, quality assessment, safety, trustworthiness, etc. Even if the application of standards remains voluntary, it yields a real advantage in creating added value to a product, service, or process. Standards are therefore considered a major source of benefits, and this is particularly true for Information and Communication Technology (ICT), which supports all other economic developments.

Indeed, the ICT sector has gained more and more importance in society as a whole in the few last decades, as evidenced for instance by the computerization of equipment in general, the advent of global connectivity, and more recently the emergence of smart paradigms such as the Internet of Things and Artificial Intelligence. We are probably only at the beginning of this transformation, wherein ICT domains fully converge. In this context, technical standardization plays a key role, for example to connect all ICT components, to make them interoperable and prevent vendor lock-in, to support the integration of multiple data sources or to provide the security and safety of the next digital world.

The Grand Duchy of Luxembourg has clearly understood the importance of the digital economy and has engaged since several years in an ambitious innovation strategy for the ICT sector, considering that the development of a trusted and sustainable economy will notably rely on a data-driven approach. The “*Institut Luxembourgeois de la Normalisation, de l’Accréditation, de la Sécurité et qualité des produits et services*” (ILNAS) fully supports this development through the “[Luxembourg Standardization Strategy 2020-2030](#)”, which identifies the ICT sector as key to fostering growth, along with the construction and aerospace sectors. In this context, ILNAS has developed the “[Luxembourg’s policy on ICT technical standardization 2022-2025](#)”, which aims to promote and strengthen the use of technical standards by the national market, to reinforce the positioning of Luxembourg in the global ICT standardization landscape, particularly through a stronger involvement of national stakeholders in the relevant standardization technical committees, and to pursue the development of research and education programs. In order to carry out this policy, ILNAS benefits notably from the support of the Economic Interest Group “*Agence pour la Normalisation et l’Économie de la Connaissance*” (ANEC GIE - Standardization Department).

In this frame, ILNAS is well involved in standardization education, as educational programs have been developed through a fruitful collaboration with the University of Luxembourg, the latest being the ongoing Master MTECH “[Technopreneurship: mastering smart ICT, standardisation and digital trust for enabling next generation of ICT solutions](#)”. This diploma allows national stakeholders to gain familiarity with Smart

Secure ICT technologies, notably from the standardization and Technopreneurship points of view, in order to seize future business opportunities offered in this innovative area.

In parallel, ILNAS also has ongoing research activities, in particular in ICT. Among the latest initiatives in this area is an ongoing research program between ILNAS and the Interdisciplinary Centre for Security, Reliability and Trust (SnT) of the University of Luxembourg entitled “[Technical Standardization for Trustworthy ICT, Aerospace, and Construction \(2021-2024\)](#)”. It is exploring Digital Trust aspects of the three sectors, with ICT in particular playing a horizontal role in the other two. The first results of this program have been presented during the World Standards Day in Luxembourg in October 2023, with the publication of the [White Paper “Trustworthiness in ICT, Aerospace, and Construction applications - Scientific Research and Technical Standardization”](#).

On the other hand, ILNAS has published a [series of White Papers and reports](#) in order to inform the market about technical standardization developments in certain ICT sub-topics.

Within this global framework, this Standards Analysis “ICT Sector - Luxembourg” is intended to serve as a practical tool to discover the latest standardization developments in the overall landscape of ICT related technologies, from more seasoned topics such as software engineering and programming languages to more recent ones such as the Internet of Things, Cloud Computing, Artificial Intelligence or Quantum Computing. Therefore, the present document will allow national stakeholders to identify relevant standardization technical committees, with the ultimate objective to offer them guidance for a potential future involvement in the standards development process and allow them to discover the services provided by ILNAS at the national level regarding technical standardization.

CONCLUSION	91

INTRODUCTION

The Information and Communication Technology (ICT) sector is a keystone of the global economy. Indeed, nowadays it provides pervasive support to all other sectors of activity. As systems become more and more digitized and intricate, the growth of the ICT sector is now driven by the ability of its multiple components to interoperate (“to talk to each other”). Standards can allow this interoperability between different products from different manufacturers, while offering solutions to ensure an adequate level of trustworthiness in their operation.

Luxembourg’s economy benefits from a vibrant ICT ecosystem. It was composed of 2,731 companies in 2020 (6.7% of the total number of companies)¹ and represented 4.4% of the total employment of the fourth quarter of 2023². ILNAS supports the economic development of the sector from the technical standardization perspective, through the implementation of the “[Luxembourg Standardization Strategy 2020-2030](#)” and the execution of the “[Luxembourg’s policy on ICT technical standardization 2022-2025](#)”. The institute undertakes multiple activities in order to develop a network of experts, support the transfer of knowledge and education about ICT standardization to national stakeholders, and strengthen their participation in related technical committees³.

In addition, current developments of ILNAS are in line with the [European standardisation strategy](#) published in 2022 by the European Commission (EC), with the aim to further strengthen the European competitiveness and resilience. Indeed, the European Union intends to reinforce its role as a global standards-setter to ensure a resilient, green and digital Single Market and standards directly support European legislation, such as [Cybersecurity Act](#), [Data governance Act](#), [Digital services Act](#). Within this framework, the EC also publishes each year, a [Rolling Plan for ICT Standardisation](#), which provides a unique bridge between EU policies and ICT standardization activities. Upon consultation and dialogue across multiple stakeholders, it specifies the priority topics in ICT, overviews policies, legislation and standardization activities for each topic and identifies the challenges that can be tackled through different actions, including the standardization.

In this context, the current version of the Standards Analysis “ICT Sector - Luxembourg” reflects the main standardization activities of recognized Standards Development Organizations (SDOs) within the ICT landscape, taking into consideration the topics identified in the 2024 version of the Rolling Plan for ICT Standardisation. This analysis serves as a practical tool dedicated to national organizations, allowing them to identify technical standardization activities supporting their business. It provides a panoramic view of the technical committees working in the domain, so that national stakeholders, whether providers or users of ICT, can easily identify standards and committees relevant to their core business and needs.

This Standards Analysis is organized as follows:

- Chapter 1 outlines the objectives of technical standardization and introduces its landscape at the international, European and national levels.
- Chapter 2 proposes a description of the categorization of the ICT sector used in this Standards Analysis (ICT subsectors) in order to present the standardization technical committees identified.
- Chapter 3 constitutes the heart of the Standards Analysis. It provides an overview of the ICT standardization technical committees, spread out according to the categories from Chapter 2. Each technical committee is presented using a table (ID-card), which details the most relevant

¹ Source: [Eurostat](#)

² Source: [Statistics portal of the Grand-Duchy of Luxembourg](#)

³ Note: In this report, the term “standardization technical committee” is generic and covers “technical committees”, “subcommittees”, “working groups”, etc.

information about its activities and allows national stakeholders to easily determine their relevance in regards to their business.

- Chapter 4 presents opportunities related to standardization for national stakeholders. It also introduces the way ILNAS supports the national economy through technical standardization.

1 TECHNICAL STANDARDIZATION AND STANDARDS

Standardization corresponds to the definition of voluntary technical or quality specifications with which current or future products, production processes or services may comply. Standardization is organized by and for all relevant interested parties based on national representation (CEN, CENELEC, ISO and IEC) and direct participation (ETSI and ITU-T), and is founded on the [principles recognized by the World Trade Organization \(WTO\)](#) in the field of standardization (see Section 1.1).

Technical standards provide an effective economic tool for achieving various objectives, such as mutual understanding, reduction of costs, elimination of waste, improvement of efficiency, achievement of compatibility between products and components or access to knowledge about technologies⁴. The application of the fundamental principles stated by the WTO throughout the development of technical standards also guarantees the legitimacy of these documents.

In addition, technical standards play an important role for innovation. As pointed out by the European Commission (EC) in its [communication on ICT Standardisation Priorities for the Digital Single Market](#): “They guarantee that technologies work smoothly and reliably together, provide economies of scale, foster research and innovation and keep markets open”. It is all the more relevant in the current context, in which the world tends to become digitized and everything becomes connected. Technical standardization is thus a keystone to ensure interoperability of complex ICT systems, thereby minimizing the barriers that may still exist to build the future of the digital world.

Finally, as stated in “[An EU Strategy on Standardisation - Setting global standards in support of a resilient, green and digital EU single market](#)”, technical standardization is a core component in the EU’s competitiveness not just at the European level, but at the international one as well.

1.1 Standardization Objectives and Principles

As stated in the [Regulation \(EU\) N°1025/2012](#) on European standardization, and according to the WTO, standardization is based on founding principles, which are observed by the formal standards bodies for the development of international standards:

Transparency

All essential information regarding current work programs, as well as on proposals for standards, guides and recommendations under consideration and on the results should be made easily accessible to all interested parties.

Openness

Membership of an international standards body should be open on a non-discriminatory basis to relevant bodies.

Impartiality and Consensus

All relevant bodies should be provided with meaningful opportunities to contribute to the elaboration of an international standard so that the standard development process will not give privilege to, or favor the interests of, a particular supplier, country or region. Consensus procedures should be established that seek to take into account the views of all parties concerned and to reconcile any conflicting arguments.

⁴ [CEN-CENELEC, “Standards and your business.” 2013](#)

Effectiveness and Relevance

International standards need to be relevant and to effectively respond to regulatory and market needs, as well as scientific and technological developments in various countries. They should not distort the global market, have adverse effects on fair competition, or stifle innovation and technological development. In addition, they should not give preference to the characteristics or requirements of specific countries or regions when different needs or interests exist in other countries or regions. Whenever possible, international standards should be performance based rather than based on design or descriptive characteristics.

Coherence

In order to avoid the development of conflicting international standards, it is important that international standards bodies avoid duplication of, or overlap with, the work of other international standards bodies. In this respect, cooperation and coordination with other relevant international bodies is essential.

Development dimension

Constraints on developing countries, in particular, to effectively participate in standards development, should be taken into consideration in the standards development process. Tangible ways of facilitating developing countries participation in international standards development should be sought.

Standardization is an efficient economic tool offering the possibility to pursue various objectives, such as:

- Management of diversity;
- Convenience of use;
- Performance, quality and reliability;
- Health and safety;
- Compatibility;
- Interchangeability;
- Security;
- Trustworthiness;
- Environmental protection;
- Product protection;
- Mutual understanding;
- Economic performance;
- Trade;
- Etc.

1.2 Standardization Landscape

According to the [Regulation \(EU\) No 1025/2012](#), in Europe, the three recognized European Standardization Organizations (ESO) are:

- European Committee for Standardization (CEN);
- European Committee for Electrotechnical Standardization (CENELEC);
- European Telecommunications Standards Institute (ETSI).

At the international level, the three recognized standardization organizations are:

- International Organization for Standardization (ISO);
- International Electrotechnical Commission (IEC);
- International Telecommunication Union's Telecommunication Standardization Sector (ITU-T).

This standardization frame allows cooperation between standardization organizations at the same level, or at different levels but on the same topics:

- CENELEC and IEC are specialized in electrotechnical standards;
- ETSI and ITU-T are focused on telecommunications standards;
- CEN and ISO are in charge of the standards in other sectors.

At the national level, one or several national standards bodies protect the interests of the country within each of the European and international standardization organizations (e.g.: in Germany, on the one hand DIN is the member of ISO and CEN, and on the other hand DKE is member of IEC, CENELEC and ETSI). In Luxembourg, ILNAS – the only official national standards body – is a member of the European and international standardization organizations CEN, CENELEC, ETSI, ISO, IEC and ITU-T.

The role of the national standards bodies has been reinforced by the amendment to the [Regulation \(EU\) N°1025/2012](#), [Regulation \(EU\) 2022/2480](#), putting the decisions concerning European standards and European standardization deliverables exclusively in the hands of EU national standards bodies.

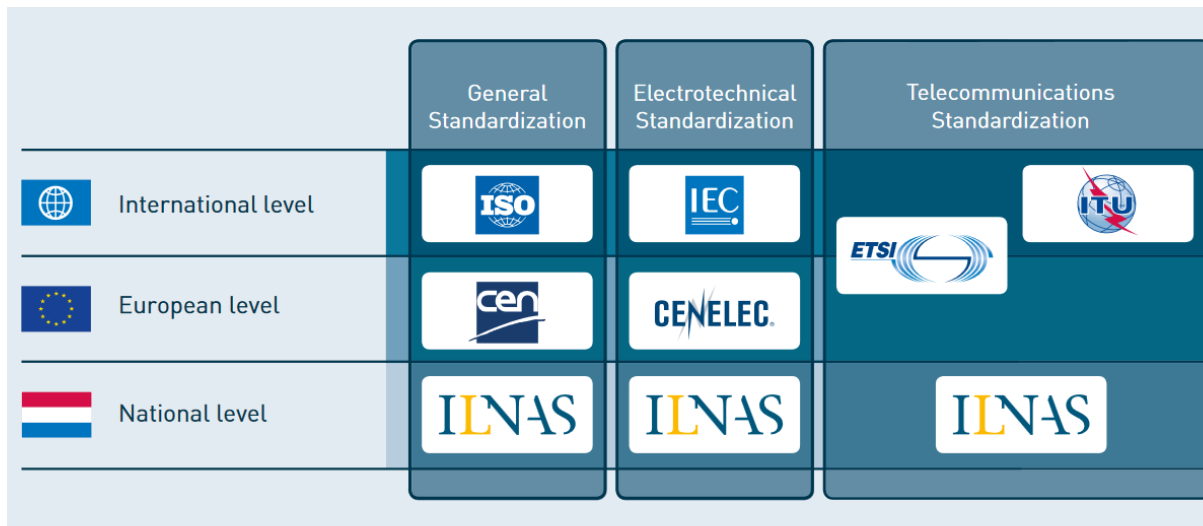

Figure 1: Interactions between the Standardization Organizations

Several bridges exist between the national, European and international standardization organizations in order to facilitate the collaboration and coordination of standardization work in the different fields.

Indeed, in order to ensure transparency in the work, prevent standards duplication, and avoid conflicting requirements, agreements have been established between international and European standardization organizations.

In 1991, ISO and CEN signed the [Vienna Agreement](#), which is based on the following guiding principles:

- Primacy of international standards and adoption of ISO Standards at the European level (EN ISO);
- Work at the European level (CEN), if there is no interest at the international level (ISO);
- When a given project undergoes parallel development, procedures are in place ensuring standardization documents of common interest are approved by both organizations (ISO and CEN).

Similarly, CENELEC and IEC signed the Dresden Agreement in 1996 with the aim of developing intensive consultations in the electrotechnical field. This agreement was superseded by the [Frankfurt Agreement](#) in 2016 with the aim to simplify the parallel voting processes, and increase the traceability of international standards adopted in Europe thanks to a new referencing system. It is intended to achieve the following guiding principles:

- Development of all new standardization projects by IEC (as much as possible);
- Work at the European level (CENELEC), if there is no interest at the international level (IEC);
- When a given project undergoes parallel development, ballots for relevant standardization documents are organized simultaneously by both organizations (IEC and CENELEC).

Under both agreements, 35% of all European standards ratified by CEN, as well as 74.5% of those ratified by CENELEC, are respectively identical to ISO or IEC standards⁵. In that respect, the European and international organizations do not duplicate work.

Similarly, ITU-T and ETSI have agreed on a [Memorandum of Understanding](#) (MoU) in 2000, lastly renewed in 2016, that paves the way for European regional standards, developed by ETSI, to be recognized internationally.

Agreements also exist between the standards organizations to facilitate their cooperation. For example, ISO and IEC have the possibility to sign conventions to create a Joint Technical Committee (JTC) or a Joint Project Committee (JPC) when an area of work overlaps the two organizations (e.g.: ISO/IEC JTC 1 for Information Technology or ISO/IEC JTC 3 for Quantum Technologies). Similarly, CEN and CENELEC have the possibility to create a JTC in areas covering the expertise of both organizations, such as in the ICT domain (e.g.: CEN/CLC/JTC 13 for Cybersecurity and Data Protection or CEN/CLC/JTC 21 for Artificial Intelligence).

ISO, IEC and ITU have also established the [World Standards Cooperation \(WSC\)](#) in 2001, a high-level collaboration system intending to strengthen and advance the voluntary consensus-based international standards system and to resolve issues related to the technical cooperation between the three organizations. Similarly, a [cooperation agreement](#) has been established between CEN, CENELEC and ETSI in order to facilitate cooperation and collaboration between the three ESOs, and to share their expertise of standards-making, particularly in the light of new technologies, mandated work and areas of common interest.

ISO and IEC Standardization Committees

ISO is the world's dominant developer and publisher of International Standards in terms of scope. It has over 25,000 standards published (21.2 % for the sole 'Information technology, graphics and photography' technical sector) and more than 4,000 standards under development⁶. ISO is in charge of developing International Standards for all industry sectors.

IEC prepares and publishes International Standards for all electrical, electronic and related technologies – collectively known as “electrotechnology”.

To prevent an overlap in standardization work related to information technology, ISO and IEC formed a Joint Technical Committee in 1987 known as ISO/IEC JTC 1 *Information technology*. It has taken a leading role in ICT standardization in the last few years with the creation of working groups and technical subcommittees directly responsible for the development of ICT International Standards.

CEN and CENELEC Standardization Committees

CEN and CENELEC are two official European Standards Organizations (ESOs) closely collaborating through a common CEN-CENELEC Management Centre since 2010. They are notably in charge of developing ICT standards at the European level. Even if most of the ICT-related topics are being tackled at the international level by ISO/IEC JTC 1, complying with the “Vienna Agreement” set up between CEN and ISO, as detailed above, CEN and CENELEC have technical committees and additional other groups active in different areas of the ICT sector directly under their supervision.

The standardization activities of CEN and CENELEC are detailed in an [annual common Work Program](#). They are active in several ICT-related areas covering both digital and smart society: e-Signatures, Intelligent Transport Systems, Smart Grids, Smart Metering, Internet of Things, Smart Homes, Smart Cities, Advanced Manufacturing, Artificial Intelligence, Blockchain and Distributed Ledger Technologies, Cybersecurity and Data Protection, Digital twin, Quantum technologies, etc.

⁵ [CEN CENELEC in figures – 2024 Q1](#)

⁶ [ISO in figures](#)

ETSI - European Telecommunications Standards Institute

ETSI is a leading standardization organization for ICT standards fulfilling European and global market needs. The European Union officially recognizes ETSI as an ESO. ETSI is active in [ten ICT “sectors”](#), regrouping a number of technical committees and covering a wide range of technologies, namely: Home and Office, Better living with ICT, Content Delivery, Networks, Wireless Systems, Transportation, Connecting Things, Interoperability, Public Safety and Security. The standardization activities of ETSI are detailed in an [annual Work Program](#), whose last edition is covering the period 2023/2024.

ITU-T - International Telecommunication Union - Telecommunication Standardization Sector

The International Telecommunication Union - Telecommunication Standardization Sector (ITU-T) is an “intergovernmental public-private partnership organization” which brings together experts from around the world to develop international standards known as ITU-T Recommendations, which cover defining elements in the global infrastructure of ICT. It is currently composed of [11 Study Groups](#) working on different aspects of ICT.

1.3 National Actors

1.3.1 ILNAS - The National Standards Body

ILNAS (*Institut luxembourgeois de la normalisation, de l'accréditation, de la sécurité et qualité des produits et services*) is a public administration under the authority of the Minister of the Economy, SME, Energy and Tourism of the Grand Duchy of Luxembourg. Founded in 2008, ILNAS represents a network of competencies relating to quality, safety and conformity of products and services (see Figure 2), and its mission is to support national competitiveness. One of ILNAS' missions is to promote technical standardization. As such, it is the Grand Duchy's National Standards Body. ILNAS organizes its standardization work according to the [Luxembourg Standardization Strategy 2020-2030](#), and associated [ICT](#), [Construction](#), [Aerospace](#), [CASCO](#) and [Sustainable Development](#) national technical standardization policies.

Figure 2: The departments of ILNAS

Overall, the objectives are to make standards available to the national market, raise awareness on the use of technical standards, promote active participation in the development and publication of standards drafts, enhance Luxembourg's international visibility in standardization, and develop strong links between standardization, scientific research and education.

1.3.2 ANEC GIE

ANEC GIE (*Agence pour la normalisation et l'économie de la connaissance*) is an economic interest group whose partners are the ministry of the Economy, the *Chambre des Métiers* and the *Chambre de Commerce*. One of its main roles is to support ILNAS in its standardization missions. In particular, it implements the 2022-2025 national standardization policy for ICT. In practice, this entails pursuing the following activities:

- Regularly informing the national market of the latest technical standardization developments.
- Actively promoting the use of standards and the benefits of participating in the standards development process.
- Animating trainings on technical standardization in relation to technologies of interest.
- Participating in national mirror committees for certain international technical committees.
- Supporting ILNAS in the production of national deliverables, such as white papers, national technical standardization reports, topic-specific standards analyses, etc.
- Supporting ILNAS in its efforts to strengthen the ties between technical standardization, scientific research, education, and innovation, namely through [research programs between ILNAS and the University of Luxembourg](#), and participation in the MTECH Master's degree ([Technopreneurship: mastering smart ICT, standardisation and digital trust for enabling next generation of ICT solutions](#)).

2 ICT SUBSECTORS DEFINITION

This section defines the subsectors of ICT used to classify the technical standardization committees that are included in this Standards Analysis. Twenty subsectors are listed, in connection with European and national standardization policy objectives for the ICT sector as well as main potential areas of interest of the national stakeholders. For the sake of alignment with the standardization priorities of the European Union in support of the digital single market, this classification is inspired by [the European Commission's Rolling Plan for ICT standardisation](#).

Indeed, the Rolling Plan (RP) is drafted by the European Commission in collaboration with the European Multi-Stakeholder Platform (MSP) on ICT Standardisation, in which ILNAS is the representative of Luxembourg. It is updated annually and lists all the topics identified as EU policy priorities where standardization, standards, or ICT technical specifications ought to play a key role in the implementation of the policy.

How these subsectors relate to the five major thematic areas identified in the RP is indicated. However, note that the mapping is not absolutely identical. This is mainly due to the fact that in the RP, technical committees may appear in multiple thematic areas, whereas they only appear once in the classification of this Standards Analysis.

KEY RP THEME	SUBSECTOR	DESCRIPTION
FOUNDATIONAL DRIVERS	Data Economy	The data economy is an ecosystem in which data is gathered, organized and exchanged by socio-economic actors in order to derive value from the gathered information. A variety of sources including sensors, social media, search engines, Internet of Things (IoT) devices can act as providers of data, which is then further stored in data centers (or in clouds) and made available for individuals or businesses to access for their benefit.
	Digital Trust: Cybersecurity, Network and Information security, Trustworthiness, and Privacy Protection	Trust is essential in ICT and it is transversal to the sector in almost any aspect of hardware and software, ranging from consumer devices and equipment to service providers and data protection. Digital Trust in ICT has to deal not only with purely technical problems but also with social aspects and constraints that have to be addressed in a technical manner. Subtopics that are covered in this subsector include cybersecurity, information and network security, trustworthiness and privacy protection.
	Governance of IT	Corporate governance involves a set of relationships between a company's management, its board, its shareholders, and other stakeholders. Corporate governance also provides the structure through which the objectives of the company are set, and the means of attaining those objectives and monitoring performance are determined. The governance of IT is thus a component or a subset of organization governance, which is one key element in improving economic efficiency and growth as well as enhancing investors' confidence. Governance of IT can be defined as the system by which the current and future use of IT is directed and controlled.

KEY RP THEME	SUBSECTOR	DESCRIPTION
KEY ENABLERS	<p>Telecommunications and Networking, and Emergency Telecommunications</p>	<p>Telecommunications refers to the theory and techniques of the transmission of signals by electromagnetic or electronic means. The telecommunications and networking subsector covers any transmission, emission or reception of signs, signals, writing, images, and sounds or intelligence of any nature by wire, radio, optical or other electromagnetic systems. Emergency telecommunications consider the specificity of data, video and text communications in the context of emergency situations and the raising of alerts. With the growing need of high-speed connectivity, lower latency, cheaper cost, and network optimization across businesses, the telecommunications sector demands the use of new concepts, for example, a new generation of mobile communications or Automatic identification and data capture techniques (such as RFID).</p>
	<p>Cloud and Edge Computing</p>	<p>Cloud Computing is an IT paradigm that enables ubiquitous access to shared pools of services and system resources, which can be rapidly provisioned with minimal management effort over the Internet. Cloud Computing has enabled considerable new potential and changed the way business processes are addressed. It also permits new kinds of technologies to emerge. For example, it can provide the power necessary to store and process large volumes of data (Big Data analytics), as well as the connectivity and management infrastructure for the Internet of Things.</p> <p>The emergence of IoT and 5G has raised the need to reduce latency for easy and fast communication between devices. Edge computing is a method of optimizing Cloud Computing systems by performing analytics at or near the data source. It consists of reducing the communication bandwidth required between the sensors and the central data center. This approach leverages resources that might not be continually needed to be connected to a network such as smartphones, laptops, tablets, and sensors.</p>
	<p>Internet of Things</p>	<p>The Internet of Things (IoT) refers to an emerging paradigm consisting of a continuum of uniquely addressable things communicating with each other to form worldwide dynamic networks. It could be also represented as a network of uniquely identifiable connected devices such as objects, devices, sensors, and everyday items with computing services, which describes a world where anything can be connected and can interact in an intelligent fashion.</p> <p>Many services can be envisioned as a result of many objects playing an active role thanks to their connection to the Internet: real-time traffic updates, building automation and controls, automatic energy management, intelligent shopping applications, vehicle auto-diagnosis, assistance for elderly or disabled people to help them living independently, etc. The IoT is highly interrelated to other ICT areas like Sensor Networks or Machine-to-Machine (M2M) communications.</p>

KEY RP THEME	SUBSECTOR	DESCRIPTION
KEY ENABLERS	Electronic Identification and Trust Services, Including e-Signatures	In an ever-more connected world, the reliance on digital services is naturally taking a larger and larger part in daily life. Thus, techniques need to be developed and improved to design and implement secure and efficient means of electronic identification of entities, be these organizations, objects or individuals. An appropriate level of security must also be endowed to the binding of a real-world identity to its digital representation, depending on the criticality of the services accessed.
	Accessibility of ICT Products and Services	Accessibility is a quality of being easy to approach, use, and understand. A lack of accessibility may lead to a certain degree of marginalization of some categories of users. Standard guidance can increase the quality of the interaction between systems (often computer-based) and the people who use and operate them. With respect to digital tools, improving accessibility can translate into hardware ergonomics, software ergonomics, human-centered design and appropriate user-system interfaces.
	Artificial Intelligence, Big Data and Virtual Reality	Artificial Intelligence (AI) refers to the ability of a computer or a computer-enabled robotic system to process information and produce outcomes in a manner similar to the thought process of humans in learning, decision-making, and problem-solving. AI can be understood as a set of techniques aimed at approximating some aspects of human or animal cognition using machines. Big Data can be defined as technologies and techniques that a company can employ to analyze large-scale, complex data for various applications intended to augment performance in various dimensions. It is defined in ISO/IEC 20546:2019 <i>Information technology -- Big data -- Overview and vocabulary</i> as “Data set(s) with characteristics (e.g. volume, velocity, variety, variability, veracity, etc.) that for a particular problem domain at a given point in time cannot be efficiently processed using current/existing/established/traditional technologies and techniques in order to extract value”.
	Software and Programming Languages	A program is a set of instructions that help a machine or computer to function automatically and software is a set of programs combined to execute a specific task. Users can choose specific programming languages and software; they are now ubiquitous and extremely important elements in almost any technology-based system. This subsector covers guidelines of commonly accepted processes and supporting tools for the engineering of software products or systems.
	Quantum Technologies	Quantum information technology leverages the principles of quantum mechanics to process, store, and transmit information. It encompasses several subfields, such as quantum computing, quantum key distribution, quantum cryptography, and quantum communication, all of which have significant potential for solving some of the most challenging problems in science and technology.

KEY RP THEME	SUBSECTOR	DESCRIPTION
SOCIETAL CHALLENGES	E-Health, Healthy Living and Aging	E-Health refers to the combined use of electronic communication and information technology in the health sector to enable better health and healthcare. It comprises technologies and guidelines in the field of health informatics, to facilitate capture, interchange, and use of health-related data, information, and knowledge, to support and enable all aspects of an overall healthcare system. Similarly, new technologies can be used to support the healthy mode of living (e.g.: personal health monitoring applications) and/or improve the living conditions of the elderly and people with disabilities.
	Education, Digital Skills, and Digital Learning	This subsector includes accepted methods and guidelines in the field of information technologies for learning, education, and training to support individuals, groups, or organizations, and to enable interoperability and reusability of resources and tools as well as to define a common language for professional digital and ICT competences, skills and knowledge applied across domains.
INNOVATION FOR THE DIGITAL SINGLE MARKET	Fintech	Fintech, or Financial Technologies, are essentially ICT techniques as applied to the world of finance. It is currently a topic at the top of the agenda in Luxembourg since Fintech are foreseen to rethink the traditional financial sector by exploiting the potential of new technologies.
	Blockchain and Distributed Ledger Technologies	A blockchain is a distributed and shared digital ledger that records all transactions that take place in a nearly-immutable, trust-spreading way. The ledger is decentralized in the sense that the database is replicated across many participants/nodes in the network, who collaborate via a consensus mechanism to create, make evolve and to keep track of records. Blockchains, and more generally distributed ledger technologies, are being considered nowadays to provide decentralized trust in many different fields, such as digital currencies, supply chains, and others.
SUSTAINABLE GROWTH	Smart Grids and Smart Metering, Efficient Energy Use	ICT is increasingly used in the energy domain in order to automate and optimize the production and distribution of energy, allowing on one hand to better synchronize the demand and supply between consumers and producers and on the other hand to improve the stability and availability of energy. The primary objective of this subsector is to manage energy production and distribution efficiently. It notably covers the design and operation of smart meters and smart grids.
	ICT Environmental Impact: Green ICT	It is a recognized fact that <i>“ICT is currently one of the fastest growing greenhouse gas-emitting and energy management sectors”</i> ⁷ . Green ICT focuses on the ability to reduce the environmental impact of IT (hardware and software) throughout its life cycle, for instance addressing waste associated with the use of hardware and software and energy consumption. It also involves the development and use of information systems that reduce the environmental impact (e.g.: energy savings) of products and services that require IT.

⁷ [Rolling Plan for ICT standardisation 2024 - ICT Environmental Impact](#)

KEY RP THEME	SUBSECTOR	DESCRIPTION
SUSTAINABLE GROWTH	Smart Cities and Communities	A smart city refers to a “community infrastructure with enhanced technological performance that is designed, operated, and maintained to contribute to sustainable development and resilience of the community” ⁸ . It has many dimensions and encompasses many economic sectors and technologies. Different dimensions are proposed for a smart city (e.g.: smart economy, smart mobility, smart environment, smart buildings, smart people, etc.). In this frame, one can consider a smart city as a system of systems, meaning it is a complex construct that requires the development of many other technologies (e.g.: Internet of Things, Big Data, Intelligent Transport Systems, etc.).
	Intelligent Transport Systems	Intelligent Transport Systems (ITS) are “transport systems in which advanced information, communication, sensor, and control technologies, including the Internet, are applied to increase safety, sustainability, efficiency, and comfort” ⁹ . This subsector can significantly contribute to cleaner, safer, and more efficient transport systems. The most significant benefits from ITS are: minimizing the impact of traffic on the environment, improving energy efficiency and decreasing dependency on fossil fuels; reducing congestion and optimizing the use of existing infrastructure; encouraging the use of environment-friendly transport modes; improving traffic safety and security; increasing convenience of transport ¹⁰ .
	Digitization of European Industry: Smart Manufacturing	The use of digital technologies to transform business has been among top priorities set by the European Commission for 2019-2024 period . European Industry and manufacturing have been considered as important application areas for digitalization. Smart Manufacturing aims at creating smart systems using modernization trends in the manufacturing environment. It corresponds to the use of smart ICT systems to transform the manufacturing environment, intending to maximize energy efficiency and productivity. Touching upon many technologies, it is an umbrella subsector which includes additive manufacturing (3D printing), automation processes and remote control of physical devices in the industrial context.
	Robotics and Autonomous Systems	“Robotics is the science and practice of designing, manufacturing, and applying robots, which are programmed actuated mechanism with a degree of autonomy to perform locomotion, manipulation or positioning” ¹¹ . Other examples of autonomous systems include autonomous vehicles and UAVs (unmanned aerial vehicles). With the increasing role of AI, more and more objects and processes gain some level of autonomy. Since robots and other autonomous systems operate in environments that often include human presence, an important place is dedicated to the standardization of their safety.

3 ICT SECTOR STANDARDS WATCH

The objective of this Standards Analysis “ICT Sector Luxembourg” is to facilitate the involvement the national stakeholders in the technical standardization process. To achieve this goal, this chapter regroups, according to the classification proposed in Chapter 2, the different relevant ICT technical standardization committees. The focus is mainly on ISO, IEC, CEN, CENELEC, and ETSI.

3.1 Data Economy

ISO/IEC JTC 1/SC 2 CODED CHARACTER SETS				
GENERAL INFORMATION				
Creation date	1987	Secretariat	JISC (Japan)	
Chairperson	Mr. Masaru Takechi	Committee Manager	Ms. Ayuko Nagasawa	
Scope	Standardization of graphic character sets and their characteristics, including string ordering, associated control functions, their coded representation for information interchange and code extension techniques. Excluded: audio and picture coding.			
Structure	WG 2 Universal coded character set			
Webpage	https://www.iso.org/committee/45050.html

CEN/TC 468 PRESERVATION OF DIGITAL INFORMATION

GENERAL INFORMATION			
Creation date	2020	Secretariat	AFNOR (France)
Chairperson	Ms. Séverine Denys	Secretary	Ms. Anna Medan
Scope	<p>Standardization of the functional and technical aspects of the preservation of digital information. In this field, the committee will develop a structured set of standards, specifications and reports, addressing business requirements, including compliance with the European legislative and regulatory framework (e.g. GDPR, eIDAS). This includes the following issues:</p> <ul style="list-style-type: none"> - Maintenance of characteristics (integrity, authenticity, reliability, usability etc.) of digital information during its life cycle; - Design, implementation and management of preservation systems processes (availability, confidentiality, etc.); - Audit and quality control procedures for the preservation of digital information; - Interoperability and information exchange between systems and services; - Procedures and processes supporting legal admissibility. <p>The committee will not develop any document that overlaps or substitutes published international or European standards, such as those developed by ISO/TC 46, ISO/TC 171, ISO/TC 20/SC 13, and ETSI. It will liaise with these committees to avoid any overlapping in the future.</p> <p>Products in the scope of CEN/TC 457 "Digital preservation of cinematographic works" are excluded from the scope.</p>

COMMENTS			
The National Standardization Commission (NSC) 01 “Cybersecurity” is mirroring the work of the European and international technical committees related to Cybersecurity and data privacy (ISO/IEC JTC 1/WG 13, ISO/IEC JTC 1/SC 27, ISO/PC 317 and CEN/CLC JTC 13).			
ISO/IEC JTC 1/WG 13 TRUSTWORTHINESS			
GENERAL INFORMATION			
Creation date	2019	Secretariat	DIN (Germany)
Convenor	Mr. Johann Amsenga	Secretary	Mr. Jan Branzell
Scope	Terms of reference: <ul style="list-style-type: none"> - Serve as the focus and proponent for JTC 1s trustworthiness standardization program; - Develop standards for trustworthiness including foundational standards such as frameworks and ontologies for guiding trustworthiness efforts throughout JTC 1 and upon which other standards can be developed; - Identify gaps in trustworthiness standardization for consideration in proposing potential new work for the relevant JTC 1 subgroups; - Identify JTC 1, ISO, IEC and external organization entities that are developing standards and related materials that contribute to trustworthiness and for each entity investigate ongoing and potential new work; - Develop and maintain a list of existing trustworthiness standards produced and standards development projects underway within JTC 1.

ETSI/TC Smart M2M SMART MACHINE-TO-MACHINE COMMUNICATIONS			
GENERAL INFORMATION			
Creation date	2014		
Chairperson	Mr. Enrico Scarrone		
Scope	The activities of TC Smart M2M will include the following: <ul style="list-style-type: none"> - Be a centre of expertise in the area of M2M and Internet of Things (IoT) to support M2M services and applications; - Maintain ETSI M2M published specifications; - Produce specifications as needed for regulatory purposes; - Transpose the output of oneM2M to TC M2M. 		

	TC Smart M2M will aim at referring to existing work done elsewhere, or encouraging existing groups to fulfil Smart M2M requirements. The TC will undertake necessary work that is not being provided for elsewhere.

ETSI/TC ESI ELECTRONIC SIGNATURES AND INFRASTRUCTURES

GENERAL INFORMATION	
Creation date	N/A
Chairperson	Mr. Nick Pope
Scope	TC ESI is responsible for standardization within ETSI supporting current and upcoming technology for Electronic Signatures and related services (e.g. registered electronic delivery, electronic seals) as well as trust service infrastructures supporting such services. This is aimed at supporting regulatory requirements such as the eIDAS Regulation as well as general commercial requirements.

	<p>TC ESI is the lead body within ETSI in relation to electronic signatures, related services and trust service Infrastructures, to protect electronic transactions and ensure trust and confidence with business partners, including the preparation of reports and other necessary activities, by:</p> <ul style="list-style-type: none"> - Developing generic standards, guides and reports; - Liaising with other ETSI bodies; - Liaising with bodies external to ETSI; - Establishing a continuing work plan.

ETSI/TC HF HUMAN FACTORS			
GENERAL INFORMATION			
Creation date	N/A		
Chairperson	Mr. Matthias Schneider		
Scope	<p>The Human Factors committee is the technical body within ETSI responsible for Human Factors issues in all areas of Information and Communications Technology (ICT). It produces standards, guidelines and reports that set the criteria necessary to build optimum usability into the emerging digital networked economy (DNE).</p> <p>The HF committee co-operates with other groups within ETSI and outside to assist them to produce standards, or other deliverables, which are in accordance with good Human Factors practice. Within ETSI it has a special responsibility for "Design for All" addressing the needs of all users, including young children, seniors and disabled people.</p> <p>Human Factors is the scientific application of knowledge about human capacities and limitations in order to make products, systems, services and environments effective, efficient and easy for everyone to use. It is a key factor for the commercial success of any ICT product or service in the digital networked economy.</p>

ETSI/TC SAI SECURING ARTIFICIAL INTELLIGENCE

GENERAL INFORMATION	
Creation date	2023
Chairperson	Mr. Cadzow Scott
Scope	<p>The aim of Technical Committee Securing Artificial Intelligence (TC SAI) is to develop technical specifications that mitigate against threats arising from the deployment of AI, and threats to AI systems, from both other AIs, and from conventional sources. Whilst in the short to medium term the focus of TC SAI will be on the application of Machine Learning (ML) the group shall also give guidance and evaluation reports to ETSI and its stakeholders on the wider developments of AI.</p> <p>TC SAI addresses 4 main aspects of AI security standardisation:</p> <ol style="list-style-type: none"> 1. Securing AI from attack e.g. where AI is a component in the system that needs defending. 2. Mitigating against AI e.g. where AI is the 'problem' (or used to improve and enhance other more conventional attack vectors), 3. Using AI to enhance security measures against attack from other things e.g. AI is part of the 'solution' (or used to improve and enhance more conventional countermeasures), 4. Societal security and safety aspects of the use and application of AI.

Involvement and Organizations	6 national delegates ILNAS, PWC Luxembourg, RHEA GROUP, SES
-------------------------------	---

COMMENTS

The National Standardization Commission (NSC) 03 “Quantum Technologies” is mirroring the work of the European and international technical committees related to Quantum Technologies (ISO/IEC JTC 1/WG 14, ISO/IEC JTC 3 and CEN/CLC JTC 22). The NSC 03 has been created in February 2024 and is still under construction.

ISO/IEC JTC 1/WG 14
QUANTUM COMPUTING

GENERAL INFORMATION

Creation date	2019	Secretariat	SAC (China)
Convenor	Ms. Hong Yang	Secretary	Ms. Jingjing Wang
Scope	Terms of reference: <ul style="list-style-type: none"> - Serve as a focus of and proponent for JTC 1’s standardization program on Quantum Computing. Identify gaps and opportunities in Quantum Computing standardization. - Develop and maintain a list of existing Quantum Computing standards produced and standards development projects underway in ISO/TCs, IEC/TCs and JTC 1. - Develop deliverables in the area of Quantum Computing. - As a systems integration entity, maintain relationships with other ISO and IEC/TCs and other organizations that are involved in Quantum Computing standardization. 		

STANDARDIZATION WORK

ISO/IEC JTC 3
QUANTUM TECHNOLOGIES

GENERAL INFORMATION

Creation date	2024	Secretariat	BSI (United Kingdom)
Chairperson	Dr. Haeseong Lee	Secretary	Mr. Petar Luzajic
Scope	Standardization in the field of quantum technologies. The scope includes standardization in the field of quantum technologies, including quantum information technologies (quantum computing and quantum simulation), quantum metrology, quantum sources, quantum detectors, quantum communications, and fundamental quantum technologies. The JTC will		

	coordinate the results of these efforts with relevant committees and subcommittees that have within their scopes the development of specific sector-based applications of quantum technologies. Excluded: Specific sector-based applications and standardization in the fields of information technology (JTC 1 and its subcommittees), nanotechnology (IEC TC 113 and ISO TC 229), fibre optics (IEC TC 86), cryogenic vessels (ISO TC 220), and semiconductors (IEC TC 47).

CEN/CLC/JTC 22 QUANTUM TECHNOLOGIES

GENERAL INFORMATION			
Creation date	2022	Secretariat	DIN (Germany)
Chairperson	Mr. Oskar Van Deventer	Secretary	Mr. Marius Loeffler
Scope	<p>The JTC shall produce standardization deliverables in the field of Quantum Technologies including quantum enabling technologies, quantum sub-systems, quantum platforms & systems, quantum composite systems as well as quantum applications covering the following areas: Quantum metrology, sensing and enhanced imaging, Quantum computing and simulation; Quantum communication and cryptography, as well as provide guidance to other technical committees concerned with Quantum Technologies.</p> <p>The JTC shall also consider the adoption of relevant international standards and standards from other organisations, like ISO/IEC JTC 1 and its subcommittees. The JTC shall produce standardization deliverables to address European market and societal needs, as well as underpinning EU legislation, policies, principles, and values.</p>		
Structure	<p>WG 1 Strategic Advisory Group WG 2 Quantum Metrology, Sensing and Enhanced Imaging, and Quantum Enabling Technologies WG 3 Quantum Computing and Simulation WG 4 Quantum Communication and Quantum Cryptography</p>

ETSI/TC eHealth eHEALTH			
GENERAL INFORMATION			
Creation date	2007		
Chairperson	Mr. Suno Wood		
Scope	<p>TC eHEALTH should form the 'horizontal' nucleus for the co-ordination of ETSI's activities in the Health ICT domain. TC eHEALTH will work in close co-operation with all relevant Technical Bodies and ISGs within ETSI, 3GPP, and oneM2M. Vital aspects to be considered by TC eHEALTH are security of systems and data, quality of services, interoperability and validation by testing and usability.</p> <p>The main objectives of TC eHEALTH are:</p> <ul style="list-style-type: none"> - to collect and define the Health ICT related requirements from relevant stakeholders and to input the requirements to the concerned ETSI Technical Bodies; - to identify gaps, where existing ETSI standards do not fulfil the Health ICT requirements, and suggest further standardization activities to fill those gaps; - to develop Health ICT related deliverables in all areas not covered by existing system specific and horizontal Technical Bodies or other SDOs; - to ensure the co-ordination of Health ICT related activities with the relevant ETSI Technical Bodies in order to avoid duplication of effort and deliverables; - to ensure that activities within TC eHEALTH are co-ordinated with other European and International Standards making bodies to avoid duplication of effort and deliverables; - to co-ordinate ETSI positions on Health ICT related issues and represent ETSI externally.

CEN/TC 428 ICT PROFESSIONALISM AND DIGITAL COMPETENCES			
GENERAL INFORMATION			
Creation date	2007	Secretariat	UNI (Italy)
Chairperson	Ms. Mary Cleary	Secretary	Mrs. Veronica Salsano
Scope	<p>CEN TC 428 is responsible for all aspects of standardization related to maturing the ICT Profession in all sectors, public and private. This includes, at a minimum, activity related to four major building blocks of ICT Professionalism:</p> <ul style="list-style-type: none"> - Competences (standardization of a common language of digital and ICT Professional competences, skills and knowledge applied in all domains); - Education and certification; - Code of Ethics; - Body of Knowledge (BoK). <p>The main areas of standardization where CEN TC 428 will develop its activity are as follows:</p>		

	<ul style="list-style-type: none"> - Definition, maintenance and evolution of digital Professional competences in all sectors, always looking at current business adoption and new emerging technologies and trends as they become relevant to the ICT profession as a whole (e.g. security, fintech, cloud, blockchain); - Interaction with different frameworks; - Curricula guidance; - ICT Professional Role Profiles; - Guidance for assessing the published standards; - Body of Knowledge (BoK) for ICT; - Development of an education and certification model related to e-CF; - Developing a sustainable code of ethics in the ever-changing ICT world. <p>All conceptual developments shall be consistent and interrelated.</p>
Structure	<p>WG 1 Ethics and other Transversal aspects</p> <p>WG 2 Competence, skills, knowledge and roles</p> <p>WG 3 Education and Training</p> <p>WG 4 Quality, Strategy and Outreach</p>

**CEN/CLC/ETSI CG-SG
COORDINATION GROUP ON SMART GRIDS**

GENERAL INFORMATION			
Creation date	N/A	Secretariat	NEC (Netherlands)
Chairperson	Mr. Jörg Seiffert	Secretary	Mr. Arie Hardenbol
Scope	<p>The CG-SG advises on European standardization requirements relating to smart electrical grid and multi-commodity smart metering standardization, including interactions between commodity systems (e.g. electricity, gas, heat, water), and assesses ways to address them. This includes interactions with end-users, including consumers/prosumers.</p> <p>Its aim is to promote the deployment of open and interoperable data architectures, based on European and international standards. The scope also includes any standards needed to design, operate and maintain electrical grids securely and efficiently. In the specific area of metering, its scope includes electricity, water, gas and heat/cooling metering devices and systems, and associated architectures.</p> <p>Within its scope the Group will address the European requirements resulting from the Clean Energy Package, including secondary legislation, and any other relevant Commission initiatives.</p> <p>The CG-SG shall also receive inputs from and provide input to the European Commission's activities related to standardization in the field of smart grids and meters.</p> <p>With respect to international standardization activities on smart grids and meters, the Group shall monitor the progress of the relevant standardization activities in ISO, IEC and ITU, and promote coordination between the European activities and those at the international level and promote when needed the consideration of European requirements within international standardization.</p> <p>The Group shall not develop standardization deliverables (e.g. European Standards, Technical Specifications, Technical Reports), but may develop informative material intended for the public domain after approval by the CEN and CENELEC Technical Boards (BTs) and ETSI Board.</p>

ISO/TC 268/SC 1 SMART COMMUNITY INFRASTRUCTURES			
GENERAL INFORMATION			
Creation date	2012	Secretariat	JISC (Japan)
Chairperson	Mr. Takahiro Kihara	Committee Manager	Ms. Ritsu Hamaoka
Scope	<p>Standardization in the field of smart community infrastructure, including basic concepts to define and describe smartness of community infrastructure as an integrative large scale product, harmonized metrics for benchmarking, usage of the metrics for application to the diverse types of communities, and specifications for measurement/reporting/verification. ISO/TC 268 SC1 focuses on technical aspects of smart community infrastructure which are basic structures that support the operation and activities of urban communities, e.g. energy, water, resource management systems, ICT infrastructure.</p> <p>The concept of smartness is addressed in terms of performance relevant to technologically implementable solutions, based on multiple aspects including sustainability.</p> <p>NOTE TC 268/SC 1, within the Scope of TC 268, addresses subjects that can relate to the scope of other technical TC/SCs in ISO/IEC only when such TC/SCs are not addressing smart community infrastructure issues. In doing so, TC 268/SC 1 in principle collaborates with such relevant TCs/SCs, through liaison mechanism or joint work. TC 268/SC1 intends to disseminate the documents developed by those relevant technical TCs/SCs by referring to them.</p> <p>Excluded: Standardization of subjects covered by TC 268/SC 2.</p>		
Structure	<p>CAG 1 Chairman's Advisory Group TG 2 Smart Community Infrastructure - Pilot Testing WG 1 Infrastructure metrics WG 2 Integration and interaction framework for smart community infrastructures WG 4 Data exchange and sharing for smart community infrastructure WG 5 Power plant WG 6 Disaster risk reduction WG 7 Utility tunnel</p>

ISO/TC 268/SC 2 SUSTAINABLE CITIES AND COMMUNITIES - SUSTAINABLE MOBILITY AND TRANSPORTATION			
GENERAL INFORMATION			
Creation date	2021	Secretariat	JISC (Japan)
Chairperson	Mr. Masanori Misumi	Committee Manager	Mr. Koichi Matsuoka
Scope	<p>Standardization in the field of Sustainable mobility and transportation will promote and support a multi-sectorial integrated approach of sustainable cities and communities with a long-term vision based on the purposes of sustainability defined in ISO 37101.</p> <p>The SubCommittee will consider organisational issues, infrastructures and services in the mobility and transportation options for cities and communities, including those related to new technologies (i.e. electric, hydrogen, autonomous). The proposed series of International Standards will provide requirements, frameworks, guidance and supporting techniques and tools for cities and territories, as well as all mobility and transportation stakeholders to plan, develop, operate, maintain and manage sustainable mobility and transportation systems and services with a long-term vision.</p> <p>Excluded: Road Vehicles covered by ISO/TC 22, Intelligent transport systems covered by ISO/TC 204, Railway applications covered by ISO/TC 269, and Electrical equipment and systems for railways covered by IEC/TC 9.</p> <p>Note: To ensure the development of a consistent set of standards on Sustainable mobility, ISO/TC 268/SC2 will liaise with relevant ISO and IEC committees.</p>

IEC/SyC SMART CITIES ELECTROTECHNICAL ASPECTS OF SMART CITIES			
GENERAL INFORMATION			
Creation date	N/A	Secretariat	IEC
Chairperson	Mr. Michael John Mulquin	Secretary	Mr. Gennaro Ruggiero
Scope	<p>To foster the development of standards in the field of electrotechnology to help with the integration, interoperability and effectiveness of city systems.</p> <p>Note 1: This will be done:</p> <ul style="list-style-type: none"> - by promoting the collaboration and systems thinking between IEC/TCs, the SyC and other SDOs in relation to City systems standards, - by undertaking systems analysis to understand the needs for standards and assess new work item proposals (NWIPs) related to city systems, - by developing systems standards where needed and by providing recommendations to existing SyCs, TCs/SCs and other SDOs. <p>Note 2: Overall common city goals include, for example, sustainable development, efficiency, resilience, safety and support for citizens' engagement and participation. However, an individual city will follow its own approach.</p> <p>Note 3: "Cities" refers to any geographically located population.</p>

CEN/TC 465 SUSTAINABLE CITIES AND COMMUNITIES

GENERAL INFORMATION			
Creation date	2019	Secretariat	AFNOR (France)
Chairperson	Mr. Holger Robrecht	Secretary	Ms. Svitlana Grand-Chavin
Scope	<p>Standardization in the field of Sustainable Cities and Communities, covering the development of requirements, frameworks, guidance and supporting tools and techniques. The proposed standardization plan will be developed to assist cities and community decision making, and support their implementation of sustainability and sustainable development. Standardization will focus on the development of a holistic and integrated approach in response to the needs of European Cities and Communities in both rural and urban areas.</p> <p>It is proposed that the standardization activities focus on:</p> <ul style="list-style-type: none"> - the purposes of urban sustainable development as defined by ISO 37101 related to Sustainable Cities and Communities, namely resilience, attractiveness, well-being, social cohesion, preservation and improvement of environment, responsible resource use, aligned with the main pillars of sustainable development (economic, environmental and social); - all innovative approaches to solution and service delivery, designed for use by all Cities and Communities, Citizens and their interested parties as a means of achieving the sustainability of urban and rural development, with the aim of continuously improving solutions and services.

CEN/TC 278 INTELLIGENT TRANSPORT SYSTEMS			
GENERAL INFORMATION			
Creation date	1992	Secretariat	NEN (Netherlands)
Chairperson	Mr. Hans Nobbe	Secretary	Dhr. Janwillem van den Berg
Scope	Standardization in the field of intelligent transport systems, encompassing services and techniques to achieve road safety, environmental sustainability and traffic efficiency, and		

	to improve the travel experience; applying information and communication technologies between vehicles/infrastructure/other road users. The following are included: aspects of cooperation (C-ITS); intermodality and multimodality; traffic management; mobility information; mobility integration; mobility as a service; systems and services for vulnerable road users; ITS services for automated vehicles; parking management; user fee collection; public transport management; eCall; after-theft vehicle recovery systems; kerbside and pavement management. Mobility accessibility for all users is an important aspect of ITS standardization.		
Structure	WG 1	Electronic fee collection and access control (EFC)	
	WG 3	Public transport (PT)	
	WG 4	Traffic and traveller information (TTI)	
	WG 7	ITS spatial data	
	WG 8	Road traffic data (RTD)

CEN/TC 310 ADVANCED AUTOMATION TECHNOLOGIES AND THEIR APPLICATIONS			
GENERAL INFORMATION			
Creation date	1993	Secretariat	BSI (United Kingdom)
Chairperson	Mr. Steven Carter	Secretary	Ms. Sophie Erskine
Scope	Standardization in the field of automation systems and technologies and their application and integration to ensure the availability of the standards required by industry for design, sourcing, manufacturing and delivery, support, maintenance and disposal of products and their associated services. Areas of standardisation may include enterprise modelling and system architecture, information and its supporting systems, robotics for fixed and mobile robots in industrial and specific non-industrial environments, automation and control equipment and software, human and mechanical aspects, integration technologies and system operational aspects. These standards may utilise other standards and technologies beyond the scope of TC 310, such as machines, equipment, information technologies, multi-media capabilities, and multi-modal communications networks.

3.23 ITU-T Study groups

ITU-T study groups (SG) enable ITU-T members to work collaboratively to develop standards known as ITU Recommendations for the various fields from a telecommunications perspective.

Participation in an ITU-T SG is done directly by the entity interested, and not through ILNAS. Table 1 lists the existing SGs.

SG	TITLE AND LINK	RELATED SUBSECTOR(S)
SG 2	Operational aspects	Telecommunications and Networking, and Emergency Telecommunication
SG 3	Economic & policy issues	
SG 5	Environment, EMF & circular economy	ICT Environmental Impact: Green ICT
SG 9	Broadband cable & TV	Telecommunications and Networking, and Emergency Telecommunication
SG 11	Protocols, testing & combating counterfeiting	
SG 12	Performance, QoS & QoE	
SG 13	Future networks	Cloud and Edge Computing Telecommunications and Networking, and Emergency Telecommunication
SG 15	Transport, access & home	Telecommunications and Networking, and Emergency Telecommunication
SG 16	Multimedia & digital technologies	
SG 17	Security	Digital Trust: Cybersecurity, Network and Information security, Trustworthiness, and Privacy Protection
SG 20	IoT, smart cities & communities	Internet of Things

Table 1: ITU study groups

3.24 ETSI Industry Specification Groups and CEN/CLC Workshops

3.24.1 ETSI Industry Specification Groups

An Industry Specification Group (ISG) is a quickly set-up type of ETSI structure that produces deliverables related to a very specific technology area. It is a structure that operates alongside ETSI technical committees, and within which both ETSI members and non-members can participate. The deliverables produced are either informative reports (known as Group Reports) or recommendations (known as Group Specifications).

As is the case for ETSI TCs, registration to an ISG is done directly by the entity interested, and not through ILNAS. Table 2 below lists the existing ISGs.

ISG	TITLE AND LINK	RELATED SUBSECTOR(S)
ARF	Augmented Reality Framework	Artificial Intelligence and (Big) Data
CDM	European Common information sharing environment service and Data Model	
CIM	Cross-cutting Context Information Management	Smart Cities and Communities, and Buildings
ENI	Experiential Networked Intelligence	Telecommunications and Networking, and Emergency Telecommunication
ETI	Encrypted Traffic integration	Digital Trust: Cybersecurity, Network and Information security, Trustworthiness, and Privacy protection
F5G	5th Generation Fixed Network	Telecommunications and Networking, and Emergency Telecommunication
ISAC	Integrated Sensing And Communications	Telecommunications and Networking, and Emergency Telecommunication
MEC	Multi-access Edge Computing	Internet of Things
mWT	Millimeter Wave transmission	Telecommunications and Networking, and Emergency Telecommunication
NFV	Network Functions Virtualisation	
NIN	Non-IP Networking	
OEU	Operational energy Efficiency for Users	ICT Environmental Impact: Green ICT
PDL	Permissioned Distributed Ledger	Blockchain and Distributed Ledger Technologies
QKD	Quantum Key Distribution	Digital Trust: Cybersecurity, Network and Information security, Trustworthiness, and Privacy protection
RIS	Reconfigurable Intelligent Surfaces	Telecommunications and Networking, and Emergency Telecommunication
THz	TeraHertz technology	Telecommunications and Networking, and Emergency Telecommunication
ZSM	Zero-touch network and Service Management	

Table 2: ETSI's Industry Specification Groups (ISG)

3.24.2 CEN/CENELEC Workshops

CEN, CENELEC, or CEN/CENELEC Workshops (WS) are structures set up in order to quickly produce documents that are considered reference documents by those entities participating in the Workshop. These are typically set up for rapidly-evolving technologies or fields. The documents produced are known as CEN (or CENELEC) Workshop Agreements, or CWAs. While they are meant to be quickly-produced reference documents, a process exists to make them into European standards, if deemed suitable.

Participation in a Workshop is done directly, and notably is open also to non-Europeans. In particular, registration in a Workshop is not done through ILNAS.

Table 3 below lists some of those WS that exist, relevant to ICT.

WS	TITLE AND LINK	RELATED SUBSECTOR(S)
CEN/CLC/WS DSO	Digital sovereignty	Digital Trust: Cybersecurity, Network and Information security, Trustworthiness, and Privacy protection
CEN/CLC/WS SEP2	Industry Best Practices and an Industry Code of Conduct for Licensing of Standard Essential Patents in the field of 5G and Internet of Things	Internet of Things Telecommunications and Networking, and Emergency Telecommunication
CEN/CLC/WS AADSF	Age Appropriate Digital Services Framework	Accessibility of ICT Products and Services
CEN/CLC/WS INACHUS	Urban search and rescue (USaR) robotic platform technical and procedural interoperability	Robotics and Autonomous Systems
CEN/CLC/WS Monsoon	Predictive management of data intensive industrial processes	Artificial Intelligence and (Big) Data Digitisation of European Industry: Smart Manufacturing
CEN/CLC/WS SEP-IoT	Workshop on Best Practices and a Code of Conduct for Licensing Industry Standard Essential Patents in 5G and the Internet of Things (IoT), including the Industrial Internet	Internet of Things Telecommunications and Networking, and Emergency Telecommunication
CEN/CLC/WS ZONeSEC	Interoperability of security systems for the surveillance of widezones	Digital Trust: Cybersecurity, Network and Information security, Trustworthiness, and Privacy protection
CEN/CLC/WS WiseGRID	Reference model for distribution application for microgrids	Smart Grids and Smart Metering, Efficient Energy Use
CEN/CLC/WS EFPFInterOp	European Connected Factory Platform for Agile Manufacturing Interoperability	Digitisation of European Industry: Smart Manufacturing
CEN/CLC/WS ZDMterm	Zero Defects in Digital Manufacturing Terminology	
CEN/WS Smart-CE-Marking	Smart CE marking for the construction industry	
CEN/WS TDT	Trusted Data Transaction	Digital Trust: Cybersecurity, Network and Information security, Trustworthiness, and Privacy protection

WS	TITLE AND LINK	RELATED SUBSECTOR(S)
CEN/WS JXF	XFS for the Java Platform	Fintech
CEN/WS IHAN	Elements of fair and functioning data economy: identity, consent and logging	Data Economy Digital Trust: Cybersecurity, Network and Information security, Trustworthiness, and Privacy protection
CEN/WS ICT	ICT/SKILLS Workshop (IT profiles and curricula)	Education, Digital Skills, and Digital Learning
CEN/WS SensorAPI	CBRNe SENSOR API Network Protocols, Data Formats and Interfaces	Internet of Things Telecommunications and Networking, and Emergency Telecommunication
CEN/WS XRLPA	eXtended Reality (XR) for Learning and Performance Augmentation	Education, Digital Skills, and Digital Learning Artificial Intelligence, Big Data and Virtual Reality
CEN/WS COVR	Safety in close human-robot interaction: procedures for validation tests	Robotics and Autonomous Systems
CEN/WS XFS	eXtensions for Financial Services	Fintech

Table 3: CEN and CEN/CLC Workshops (WS)

4 OPPORTUNITIES FOR THE NATIONAL MARKET

The purpose of this Standards Analysis “ICT Sector - Luxembourg” is to encourage the participation of national stakeholders in technical standardization, as doing so would directly contribute to supporting and stimulating the Luxembourg ICT market’s competitiveness, visibility and performance. Many national organizations are involved in ICT technical standardization, offering them unique opportunities to participate in the process and help design the future global ICT landscape, in all topics ranging from Software Engineering to the new Smart ICT paradigms (e.g.: Quantum Technologies, AI, Blockchain), and through Information Security and Digital Trust. This chapter provides an overview of ILNAS developments aiming at facilitating the involvement of stakeholders in the technical standardization process, for the benefit of the national economy.

The ICT sector is, at a national level, the most active standardization sector. Luxembourg is a “P-member”¹² of ISO/IEC JTC 1 and represents national interests in its plenary meetings. 92 delegates¹³ from the country are currently involved in international and European technical standardization committees of the ICT sector. However, considering the size and richness of the ecosystem of organizations involved in ICT in Luxembourg, ILNAS believes that ICT standardization technical committees could still attract more national stakeholders and make them benefit from related opportunities. In this way, ILNAS, with the support of ANEC GIE, is following ICT-related technical committees in order to provide the most relevant information to the national ICT community..

In short, ILNAS, with the support of ANEC GIE, undergoes different activities to inform national stakeholders and support their normative steps. The opportunities presented in this chapter are available at the national level, and should be considered by stakeholders as a series of proposals, inviting them to go further and to engage in activities to take advantage of standardization.

4.1 Information about Standardization

4.1.1 Awareness Sessions

Interested national stakeholders can contact ILNAS and ANEC GIE in order to set up a dedicated awareness session. This kind of meeting aims at providing basic knowledge about standardization as well as information that meets the standards-related interests of the requesting organization. A sample of relevant technical committees and standards projects under development is given to allow one to take advantage of standardization, for example by registering in the identified technical committees.

Aside from making direct contact, interested stakeholders can also fill out a [declaration of interest in ICT standardization](#) that ILNAS and ANEC GIE will act on.

4.1.2 ICT Standards Watch

The objective of this Standards Analysis is to facilitate the identification of technical committees in the ICT domain that meet organizations’ potential interests. In addition, ILNAS, with the support of ANEC GIE, proposes a [focused standards watch service](#) to answer the needs of a given national organization. This service consists in the analysis of relevant standards (both published and under development) and technical committees related to a specific need identified by the requesting organization. A standards watch report is delivered at the end of the process, and some additional steps can be proposed by

¹² P-members actively participate by voting on the standard at various stages of its development, while O-members can observe the standards that are being developed, offering comments and advice. See the [ISO website](#) for more detail.

¹³ Some experts are registered in more than one technical committee.

ILNAS and ANEC GIE, such as registration in one or more targeted technical committees to allow the follow-up of the relevant standardization developments by the requesting organization. This service can also consist in the verification of already-established standards catalogues.

4.1.3 General Dissemination of Normative Information

Publications

ILNAS, with the support of ANEC GIE, regularly publishes and disseminates reports and White Papers at the national level in order to provide valuable information on ICT standardization topics to the market. They are freely available on the [Portail-Qualité](#).

News Items

ILNAS and ANEC GIE regularly publish, on the [Portail-Qualité](#), news items related to recent developments in technical standardization, and encourage interested parties to take advantage of these developments. Anyone interested can register to the [Standardization Newsletter](#) in order to receive a summary of these news items.

Technical Standardization Data Sheets

Data sheets providing information on technical committees and relevant technical standards in specific focused areas are freely available on the [Portail-Qualité](#). They are covering different ICT topics, such as Blockchain and distributed ledgers, Cloud Computing, Digital Twin, Quantum technology, etc. They can ideally complement the Standards Analysis with examples of standards and projects in these areas.

Videos Promoting Standards and Standardization

The application and uptake of ICT standards is also a key opportunity that the market can take advantage of. In order to encourage this, videos dedicated to certain standards series are produced and made freely available on the [ILNAS Luxembourg YouTube channel](#) (along with other promotional videos).

4.1.4 Purchase of Standards

The [ILNAS e-Shop](#) is a catalog of more than 210,000 normative documents. It offers the possibility to purchase national (ILNAS and DIN), European (CEN, CENELEC and ETSI¹⁴) and international (ISO and IEC) standards in electronic format at competitive prices. This catalog is available in three languages: English, French and German.

4.1.5 Free Consultation of Standards

ILNAS offers the possibility to consult its entire standards' catalog free of charge through dedicated reading stations located in different places in Luxembourg¹⁵. This service allows, for example, interested organizations or individuals to consult a standard before its purchase on the ILNAS e-Shop.

¹⁴ ETSI standards are available free of charge

¹⁵ The full list can be found at this location: <https://portail-qualite.public.lu/fr/normes-normalisation/achat-consultation-normes.html>

4.1.6 Standardization Research Results

Technical Standardization for Trustworthy ICT, Aerospace, and Construction (2021-2024)

ILNAS and the Interdisciplinary Centre for Security, Reliability and Trust (SnT) of the University of Luxembourg have recently launched a new research program entitled “[Technical Standardization for Trustworthy ICT, Aerospace, and Construction \(2021-2024\)](#)”. Covering all three of the priority sectors identified in the [Luxembourg Standardization Strategy 2020-2030](#) (ICT, construction, and aerospace), this program is exploring reliability, security and privacy aspects in all three sectors, with ICT playing a crucial transversal role.

The first results of this program have been presented during the World Standards Day in Luxembourg in October 2023, with the publication of the White Paper “[Trustworthiness in ICT, Aerospace, and Construction applications - Scientific Research and Technical Standardization](#)”.

4.2 Training in Standardization

4.2.1 Training Catalogue

ILNAS, with the support of ANEC GIE, develops a [training catalogue](#) annually, which is updated according to market expectations. There are online training videos on general aspects of technical standardization that are available free-of-charge (e.g.: Standardization and conformity, Standardization and Legislation, Standardization in the ICT sector), and technical trainings on specific ICT standardization topics:

- Standards for Interoperability and Portability in Cloud Computing;
- AI Standards watch: standards relevant to the proposed AI Act;
- Quantum technologies and technical standardization;
- Workshop: Artificial intelligence and technical standardization.

These trainings aim at meeting the expectations of national stakeholders in terms of normative knowledge in the relevant fields, in particular in ICT. Based on courses proposed in the training catalogue, customized training sessions can also be organized. Any request will be evaluated and a dedicated training program will be proposed to serve specific professional development needs.

4.2.2 Professional “Master in Technopreneurship: mastering smart ICT, standardisation and digital trust for enabling next generation of ICT solutions”

ILNAS, supported by ANEC GIE, with the University of Luxembourg and the Chamber of Employees (CSL) have developed a Master entitled “[Master in Technopreneurship: mastering smart ICT, standardisation and digital trust for enabling next generation of ICT solutions](#)”. It started in 2021 and is designed for experienced professionals who wish to develop their technological skills in the field of Smart Secure ICT and technopreneurship.

This program focuses on Smart Secure ICT and provides students with the Smart ICT concepts and tools at their disposal to develop their sense of technical innovation (or “technopreneurship”). Digital Trust is also a central component, and it is not only treated from the point of view of security, but also considering other aspects like reliability, accountability, privacy, transparency, integrity, legitimacy, etc. in order to allow the adoption of Smart ICT technologies and the development of innovative services, products, and businesses. The Master’s program tackles various aspects of Smart ICT and their

applications, such as the development of Cloud Computing, Internet of Things, Artificial Intelligence or Blockchain and Distributed Ledger Technologies. International experts address these Smart ICT concepts, along with the concepts of information security and Digital Trust, which are essential now more than ever.

This program provides lectures from three points of view:

- Technical: providing the fundamentals of Smart ICT technologies and security techniques and the latest scientific developments;
- Technopreneurship: in order to highlight major opportunities for technical innovation;
- Technical standardization: plays a key role within the program, as an important source of knowledge and good practices, while defining the future ICT. Concretely, technical standardization remains a main keystone between Smart ICT technologies, the related Digital Trust needs, and the development of business innovation, as it points the way forward.

4.3 Involvement in Standardization

4.3.1 Becoming a National Delegate in Standardization

Benefits of Participation in ICT Standardization Technical Committees

In Luxembourg, registration in technical committees from ISO, IEC, CEN or CENELEC is [free-of-charge](#). Participating in ICT standardization technical committees offers a broad set of opportunities and benefits, such as:

- Giving your opinion during the standardization process (comments and positions of vote on the draft standards);
- Showcasing your know-how and good practices;
- Accessing draft standards;
- Anticipating future evolutions of ICT standardization;
- Collaborating with strategic partners and international experts;
- Enhancing the visibility of your organization at national and international level;
- Identifying development opportunities;
- Making your organization competitive in the market.

Participating in the Training for New Delegates in Standardization

ILNAS can organize trainings for newcomers in technical standardization, who have registered in a technical committee. They are encouraged to participate in order to better understand the roles and missions of delegates in standardization on one hand, and to become familiar with the tools and services at their disposal for this work on the other.

In addition, ILNAS has also created a video training for new delegates, as well as other standardization training videos covering certain general aspects. All these videos are available [online](#).

Support to National Delegates

As the national standards body, ILNAS, with the support of ANEC GIE, offers its support to national delegates of the different committees at the national level. These duties are of primary importance and well stated in the “Luxembourg’s Policy on ICT technical standardization 2022-2025”, which aims at developing the ICT technical standardization representation at the national level.

Particularly in the ICT sector, ILNAS, with the support of ANEC GIE, proposes a dedicated coaching service that is available for any registered national delegate, who requires assistance for the achievement of her/his standardization work.

Stronger Commitment as a National Delegate (Chairman, Head of Delegation, Editor of European or International Standards)

Registration as a national delegate offers possibilities to assume different levels of involvement, such as:

- Chairman of a national mirror committee: each national mirror committee has to nominate a chairman who will be in charge of the organization of the national community of delegates registered in that particular committee. Indeed, the chairman has to vote on the draft standards on the basis of the consensual position agreed between the economic entities represented within the national mirror committee.
- Head of delegation: a national delegate can be nominated by the national mirror committee to represent its position during plenary meetings of the corresponding international or European technical committees.
- Editor or co-editor of standards documents: each standards project is subject to a call for participation. In this frame, a national delegate can choose to actively participate in the project as an editor or co-editor. He will then take the responsibility to ensure the successful conduct of the project until its publication.

4.3.2 Commenting Standards under Public Enquiry

ILNAS proposes, through its [e-Shop](#), the opportunity to submit comments on the standards under public enquiry. Every interested national stakeholder can propose changes to a draft standard, regardless of whether this stakeholder is officially registered in the technical committee responsible for the development of that standard.

4.3.3 Proposing New Standards Projects

National stakeholders can propose new standardization projects at international, European and national levels through ILNAS. The national standards body offers its support to ensure the good implementation of the process and the project's compliance with the related rules and legislation.

This opportunity can allow national stakeholders to take a leading role in the standardization of a specific domain and to benefit from the definition of future market rules.

HIGHLIGHTS OF OPPORTUNITIES AT THE NATIONAL LEVEL

Luxembourg offers different opportunities to national stakeholders to enable them to take advantage of technical standardization, summarized as follows:

- To be informed about standardization:
 - Benefit from dedicated awareness sessions.
 - Identify the most relevant ICT technical standardization committees and standards projects using the standards watch service.
 - Consult ILNAS publications on ICT standardization.
 - Consult freely national, European and international standards.
 - Benefit from the ICT standardization research results at the national level.

- To be trained in technical standardization:
 - Participate in the trainings on ICT standardization.
 - Participate in the professional “Master in Technopreneurship: mastering smart ICT, standardisation and digital trust for enabling next generation of ICT solutions”.

- To be involved in standardization:
 - Become national technical standardization delegate:
 - Participate in ICT technical committees,
 - Register in the training for new delegates in standardization,
 - Benefit from the support offered by the national standards body,
 - Take on additional responsibilities as a national delegate (chairman, head of delegation, editor of European or international standards project).
 - Submit comments on draft standards under public enquiry.
 - Propose new standards projects.

As long as the stakeholders of the sector wish to seize these opportunities, ILNAS, supported by ANEC GIE, can facilitate getting on board the overall process.

As the national standards body, ILNAS offers national stakeholders the possibility to follow specific standardization activities of technical committees, either at European or international level. It supports those who are interested to participate in standardization activities, namely by providing information and delivering trainings. Therefore, resources from ILNAS and ANEC GIE are specifically dedicated to these aspects and are able to efficiently support and inform prospective national delegates.

CONCLUSION

The ICT sector is constantly evolving. From the continued improvement of traditional topics to the development of new and innovative digital products and services, ICT constitutes a major source of economic development and it directly participates in the resolution of current environmental and social concerns. Moreover, ICT plays a crucial role to support innovation and foster the development of all the other economic sectors where applications and services offer new opportunities. This is particularly true of Smart ICT technologies such as Quantum Computing, Cloud Computing, the Internet of Things, Artificial Intelligence, and Blockchain. At the same time, providing confidence in digital services and securing complex systems remain essential to reap the full benefit of ICT.

Rapid technological advancements in ICT and their widespread adoption have resulted in a huge demand for and development of relevant technical standards. In this context, standards are key not only to support the development of ICT, but also to address the arising challenges. On the one hand, technical standardization plays an important role to give a first-hand insight into the latest developments, thus supporting innovation, and also to contribute to the harmonization of systems and procedures, opening access to external markets, ensuring constant progress, and building trust. On the other hand, standards contribute to promote and share good practices and techniques available through the market. They ensure the quality, security and performance of products, systems, and services. They also facilitate dialogue and exchange between various stakeholders. In this sense, standardization represents an important economic lever to improve business productivity.

ICT is one of the growth sectors identified in the “[Luxembourg Standardization Strategy 2020-2030](#)”, since it supports many innovative or smart developments. ICT is indeed one of the most competitive economic sectors in the Grand Duchy of Luxembourg, which has high-quality communication infrastructures, hosts several world-leading ICT companies as well as many start-ups¹⁶, and is composed of a market of many companies, associations, administrations, and experts. Luxembourg is also particularly active in creating a secure environment for developing a trusted data-driven economy.

ILNAS, with the support of ANEC GIE, constantly analyzes ICT technical standardization developments and actively supports national stakeholders who want to be involved in this area, according to “[Luxembourg’s Policy on ICT technical standardization 2022-2025](#)”. The main objectives of this policy are to foster and strengthen the national ICT sector’s involvement in standardization work. To achieve this, ILNAS is conducting three intertwined projects:

- a) Promoting ICT technical standardization to the market;
- b) Reinforcing the valorization and the involvement regarding ICT technical standardization;
- c) Supporting and strengthening education about standardization and related research activities.

In line with the first project, this Standards Analysis “ICT Sector - Luxembourg” constitutes a tool to foster the positioning of Luxembourg in the ICT standardization landscape. It highlights the opportunities offered to the national market to participate in standardization.

Similarly, for the second project, ILNAS, aided by ANEC GIE, offers its support to different industries/organizations through standardization according to the nature of their business at the national level. ICT related technical committees already benefit from a good national representation with 92 national delegates currently registered to participate in one or several of these normative domains¹⁷. This figure demonstrates the interest of individuals and industries/organizations in technical standardization. ILNAS has also undertaken other initiatives in order to facilitate the participation of national stakeholders in specific ICT standardization areas, such as the creation of National

¹⁶ See for instance the “[Startup Ecosystem](#)” website for more information.

¹⁷ Note that certain experts are registered in more than one technical committee

Standardization Commissions, offering a single access point to multiple international and European technical committees active in specific areas. The first one, dedicated to cybersecurity, was created in 2021, and a second one on “Quantum Technologies” was launched in February 2024. ILNAS intends to adopt the same approach for other ICT topics in which several technical committees are active in order to continuously improve the experience of its national standardization delegates and facilitate their understanding of the overall standardization picture in their domain.

Finally, conforming to the third project of the policy, ILNAS, with the support of ANEC GIE, has undertaken concrete developments for strengthening education and research activities in the area of technical standardization. It includes the launch of a professional Master “Master in Technopreneurship: mastering smart ICT, standardisation and digital trust for enabling next generation of ICT solutions”, that is running since February 2021 and will see its next class starting in September 2024. ILNAS and the University of Luxembourg are also implementing the research program “[Technical Standardization for Trustworthy ICT, Aerospace, and Construction \(2021-2024\)](#)”, which is exploring Digital Trust aspects of the three sectors, with ICT in particular playing a horizontal role in the other two. The first results of this program have been presented during the World Standards Day in Luxembourg in October 2023, with the publication of the [White Paper “Trustworthiness in ICT, Aerospace, and Construction applications - Scientific Research and Technical Standardization”](#).

In parallel, ILNAS, with the support of ANEC GIE, aims to create awareness and interest concerning relevant standardization developments within the national market, with the [publication of White Papers and National Technical Standardization Reports on Smart ICT technologies](#).

The three projects of the “Luxembourg’s Policy on ICT technical standardization 2022-2025” will allow the national market to make rapid progress and reap the benefits of technical standardization effectively. A proper understanding of the stakes associated with ICT standardization is key to adopting the appropriate position across the standardization landscape and benefit from all the related opportunities. Driven by the motto of the Luxembourg Standardization Strategy 2020-2030: “Technical standardization – An inclusive tool for performance and excellence to serve the economy”, ILNAS, with the support of ANEC GIE, stands ready to encourage and assist each initiative in this process.
